

# Tharun Kumaar U

SOFTWARE DEVELOPER Backend, mobile and the deployments behind them

Sharjah, UAE · +971 56 365 1564 · +91 84896 44851 · tharunkumaar.u@gmail.com  
linkedin.com/in/tharun-kumaar-u · tharunkumaar.github.io · UAE Resident (Employment) Visa to Apr 2028 · Indian national · English, Tamil

## PROFILE

Only engineer in the software division of a UAE IT solutions company. Five enterprise platforms in production in under two years: FastAPI and PostgreSQL backends, React dashboards, Flutter mobile apps, and the Ubuntu and Windows IIS deployments behind them. The largest is a Play Store field service system running in six countries.

## TECHNICAL SKILLS

- Languages** Python, Dart, JavaScript, TypeScript, SQL
- Backend** FastAPI, SQLAlchemy (async), Alembic, Celery, Redis, REST API design, JWT, SuperTokens, RBAC and multi-tenancy
- Frontend** React 19, Material UI, Redux, Vite, Next.js, Tailwind CSS
- Mobile** Flutter, Firebase (FCM, Firestore, Cloud Storage), offline-first sync, Play Store releases
- Databases** PostgreSQL, MySQL, SQLite. Schema design, migrations, indexing, production data repair
- Deployment** Docker and multi-stage builds, Docker Compose, nginx, GHCR, CI/CD, Ubuntu server administration, Windows Server and IIS
- Integrations** Windream ECM (installation, configuration, API, production support), Stripe, Microsoft MSAL, HaloPSA, AWS S3
- Practice** Git, pytest, deployment runbooks, incident response, AI-assisted development

## EXPERIENCE

### Missan IT Solutions

Sharjah, UAE · Jul 2025 to present

Software Developer from Oct 2025. Joined as Software Engineer Intern (Jul to Sep 2025) and converted to full time.

- Sole engineer for the company's entire software division. Primary developer on five enterprise platforms covering FastAPI backends, React dashboards and Flutter apps, each owned from database schema through to production deployment and support.
- Deploy across two stacks: containerised services on Ubuntu (Docker Compose, nginx, GHCR, CI/CD) and Windows Server IIS builds, including on-premise Windream ECM installation and configuration in client environments.
- Started in 3-person project teams and now run the division alone, using AI-assisted development (Claude Code) to hold delivery across all five platforms.
- Fix production incidents on live client systems: record collisions, timesheet data loss, mobile sync failures. Every production data fix ships with a tested repair and rollback script.

### Key project deliveries *client names withheld under NDA*

#### Field Service Management Platform

FastAPI · React · Flutter · Docker

Multinational industrial services client

- Three-tier platform in continuous release: a 13-module FastAPI backend (PostgreSQL, async SQLAlchemy, Alembic, Celery on Redis, Firebase), a React 19 dashboard, and a Play Store Flutter field app with offline-first sync so technicians keep working without a signal.
- Multi-tenant schema with entity-level isolation and 3-level permission inheritance. Six Docker containers on an Ubuntu server behind nginx, released through a GHCR pipeline. Around 200 users across the UAE, Saudi Arabia, Qatar, Egypt, Morocco and India.

#### Facility Maintenance Ticketing Platform

FastAPI · React · Flutter

Property portfolio client, pre-launch

- SLA-driven ticketing on web and mobile: an 8-role hierarchy with automatic fallback (Supervisor to Manager to Admin), quotation accept and reject, and a materials and store-keeper workflow. Wrote the schema, codebase audit and PRD-to-module mapping.

#### Enterprise Document Management Front-End

React · Windream ECM · IIS

Enterprise client

- React and Material UI interface over Windream ECM with in-browser PDF editing and annotation (PDFTron WebViewer, PSPDFKit, pdf-lib), analytics dashboards and calendar scheduling. Production runs on Windows Server IIS; staging on a Dockerised nginx build.
- Inherited from the original developer. Now responsible for production support across five live client environments handling roughly 2,500 documents a month.

#### Multi-Tenant SaaS Platform

FastAPI · SuperTokens · Stripe · AWS

Employer product

- Subscription billing on Stripe, enterprise SSO through Microsoft MSAL, SuperTokens authentication and S3 storage behind a FastAPI backend, with a React and TypeScript console and a Flutter client.
- Also built: a geofenced attendance and HR app (Flutter, Google Maps, background services, FCM), a Next.js site and internal ERP configuration.

### OOMMAA Group of Companies

Dubai, UAE · Jan to Jun 2025

App Developer and Digital Operations Coordinator

- Built a working Handyman Service Booking prototype (Flutter, Firebase) to specify requirements and hand them to an external development team: OTP authentication, Firestore real-time sync, GPS service matching and push notifications.

## EDUCATION

### B.Tech, Computer Science and Engineering. Kalasalingam Academy of Research and Education, India

Sep 2022 to Apr 2026

Data Science specialisation. CGPA 8.34 of 10, First Class with Distinction. Final-year project semester served in full-time UAE employment.

### Semester Exchange, ICT in Business. Pacific Link College, RAK Campus, UAE

Nov 2024 to Nov 2025

## ACHIEVEMENTS

- First place out of 40+ teams, 24-hour IEEE hackathon (TECHX, JIT Madras): AI crop-disease prediction using CNNs and edge computing.
- Qualified for the university round of Smart India Hackathon: NFC-based drug inventory and supply-chain tracker.
